NMCUSD Cloud

What it is and is not

General Overview

All files stored on the Desktop and in the Documents folder will be automatically backed up as they are created, and then again every 15 minutes while you are connected to the district network. There is limited space so, only store important district related files on the Desktop and in Documents. Do not store personal files on the Desktop or in Documents. The recycling bin, and downloads are not backed up.

Recovering files does take time and depending on the current workload wait time can be considerable. Therefore, delete files with caution.

Current files will be migrated to this new cloud.

Students have less space than staff. Students are limited. Students in photo, YCP, and other CTE course will have more space based on course requirements. If a student fills up their space, a staff member will have to submit a ticket for them.

How do I Share Files?

Shared files will be added to your computer as requested. This will be done in the form of a Z:\ Drive. You will only be able to access these files while on the district's network.
